Other Information

What is Propecia and how does it work?

Propecia represents a convenient and effective treatment method of male pattern hair loss. It is a medicine specially designed for men use only. Women and children should not use this medicine.

The medicine contains the active component Finasteride which works to improve the male pattern baldness.

The medicine averts a certain body process which is known as a transformation of male hormone testosterone to dihydrotestosterone (DHT). This transformation affects the quality and quantity of hair mass on the scalp of a person, leads to deterioration of the hair density, which results in hair follicles getting thinner and falling from the top of the head and from the temple areas.

Such hair thinning and falling is called male pattern baldness or hair loss on the on the vertex and the

anterior mid-scalp area.

Male pattern hair loss is a common condition in lots of men due to hereditary factors, but it can be stopped and prevented with the help of modern method called Propecia.

If you experience thinning of the hair on the scalp or temple areas, consult your doctor about use of Propecia. It is very effective and allows restart the growth of the hair on the balding parts just within several months of use.

Propecia is for use by men only and can be contraindicated in cases of allergies and skin reactions. It is important to start the treatment only after consultation with an expert.

How to use Propecia and the correct dosage

Propecia is available in the form of the film coated tablets for oral use. The dosage for all categories of patients is 1mg taken each day of the treatment. It is good to take the medicine the same time each day. Do not skip or miss your dose. Regular use gives better and faster results.

The medicine should be taken orally with water with or without food. It is essential to take Propecia regularly to get the effective results of the treatment. Patients usually need to consume Propecia during 3 months period or even more to observe the first results. Still, if the use of the medicine during 12 months does not seem to be beneficial, it should be stopped.

Usually the effects are seen sooner than the period of 3 months. Men start noticing that the mass of the hair becomes greater, the hair quality improves gradually.

Discontinuation of the treatment will lead to reoccurrence of the baldness.

Important information and side effects of Propecia

To be sure Propecia treatment is effective as well as safe for you, it is necessary to discuss its use with a doctor. It is important to report to your doctor: any other health disorders you are having, any other medicine you are taking. Besides, men are asked to take a special blood test called PSA (prostate specific antigen) to eliminate the risks associated with prostate cancer.

Men, who are taking the medicines for the treatment of prostate enlargement or any other prostate problems, should discuss the possibility of Propecia treatment.

If you are having any of the following, please do not use Propecia without first consulting a doctor: prostate problem, prostate cancer, urination problem, infections of the bladder or prostate, liver or kidney malfunction.

Propecia is generally safe, if used with accordance to the directions available with the medicine or doctor's prescription. Still it may cause side effects such as decreased libido, weakness, headaches, rash on the skin, abnormal ejaculation and others. If any of the side effects from the mentioned above bother you or you experience other side effects, consult your doctor right away.

Some medicines may affect Propecia. You can ask your doctor or read the information about possible drug interactions from the label available with the medicine.

Buying Propecia online is very cost-effective especially if you want to order this medicine in bulk. Online ordering is convenient and saving your money and time.
